## Integrating primary health care: leading, managing, facilitating

Paul Thomas. Radcliffe Publishing, Oxford 2006. 248pp. £27.95.

Primary healthcare – general practice in the UK, family practice in the USA – represents a system of first-contact care provided by a range of professionals typically including doctors, nurses, health visitors and counsellors but also embracing accident and emergency, optometry, dentistry, community paediatrics, gynaecology and sexual health. Primary care has been at the centre of many healthcare reforms in the NHS, and is the focus of the most recent government White Paper entitled *Our health, our care, our say*.<sup>1</sup> The primary healthcare team can be regarded as being at the centre of general practice and primary care in the UK, and this book is largely concerned with the integration, leadership and management of this increasingly complex team, a subject which is likely to become more important as new roles within the healthcare profession develop and traditional roles change. These include the expanding role of nurses in the management of chronic disease, of nurse practitioners in the first-line assessment of patients presenting in general practice, the development of intermediate care by general practitioners with special interests and the policy direction of moving elements of hospital care into the community. Given that the skills of leadership and the management of organisations and of change are not innate, these changes have clear implications for the education and training of all healthcare professionals.

Paul Thomas' book approaches these challenges in a novel and somewhat idiosyncratic way. He writes from the perspective of a general practitioner with a good deal of experience of organisational change and a broad and deep knowledge of both theory and practice in many aspects of the delivery of primary care. Much of

the book is organised around three familiar scenarios – the development of a general practice, the development of a community hospital, and locality development – but much of the theory described and applied will be less familiar, including whole-systems theory, linearity versus complexity, leadership theory and personal construct theory. The result is a densely written and often densely argued text which combines recognisable problems in clinical and professional life with innovative and interesting theoretical approaches to their solution. There is a great deal of cross referencing to other sections of the book and an iterative approach which sometimes verges on the repetitive. Indeed, the author indicates that there are 'many possible paths through the book and simply reading it from beginning to end may not be the most helpful one'. For some readers this may be liberating, but others of a more linear frame of mind may find the organisation of material frustrating and difficult to follow. In its four sections the book explains why integrated primary healthcare is important, provides advice on developing leadership skills, explores theories of integration and finally describes useful techniques related to these. While I found many of the 'worked examples' refreshing and some of the guidance on working with small and medium-sized groups helpful, these were not always simple to find and navigating the book is not easy. Although the writing style is generally lucid and literate, the complexity of the text as well as of some of the ideas within it may be discouraging for readers looking for easy 'take home' messages. Although a welcome antidote to the increasing sound bite approach to much medical writing and medical education, greater concision in some sections of this book would have been helpful. As the saying goes 'If I had had more time, I would have written a shorter book'.

While Thomas is expert in the integration of organisational and developmental theory drawn from a range of other disciplines into
