

Errata

Tomlinson SE, Hanna MG. Acute neurology.

***Clin Med* 2007;7:272–7.**

Please note that the loading dose of phenytoin listed in the ‘Status epilepticus’ paragraph on page 276 should be 15 mg/kg rather than 1.5 mg/kg.

Alam F. Managing acute behavioural problems in medicine.

***Clin Med* 2007;7:292–5.**

Please note that the following should replace the final sentence of the first column on page 293:

The drugs of choice are long-acting benzodiazepines such as clordiazepoxide which is used usually in various regimes like front loading, fixed dosing schedule or symptom-triggered therapy.
