

CT Chest / CT-PA findings	Number
Normal	37
Incidental findings	11
Interstitial changes - fibrosis	14 (11 new, 3 thought to pre-date COVID)
Interstitial changes – ground glass opacities	3
Resolving pulmonary emboli changes	2

### **S8. CT Chest / CT-PA findings at Post COVID Review.**

CT imaging findings in patients selected for further Post COVID imaging. Incidental findings included emphysema, bronchiectasis, sarcoidosis, pulmonary nodules. Resolving pulmonary emboli (PE) changes include resolving emboli and infarcts on follow-up imaging in patients known from previous imaging to have had a PE. No new PEs were identified in Post COVID imaging that had not been diagnosed on imaging undertaken before 12 weeks post-discharge. CT = Computed Tomography; PA = Pulmonary Angiography.
